## Montana Board of Oil and Gas Conservation Environmental Assessment

**Operator:** <u>Slawson Exploration Company, Inc.</u>

County: Richland, MT; Field (or Wildcat) Wildcat

Well Name/Number: Android 1-6H
Location: SE SE Section 6 T23N R53E

**Air Quality** (possible concerns) Long drilling time: No, 25-35 days drilling time. Unusually deep drilling (high horsepower rig): Triple derrick drilling rig. Drilling a single lateral horizontal Middle Bakken Formation well, 13,093'MD/9,221'TVD. Possible H2S gas production: Slight chance H2S. In/near Class I air quality area: No Class I air quality area. Air quality permit for flaring/venting (if productive): Yes, DEQ air quality permit required under 75-2-<u>211.</u> Mitigation: X Air quality permit (AQB review) \_\_ Gas plants/pipelines available for sour gas \_\_ Special equipment/procedures requirements \_\_ Other: Comments: Single lateral, 13,093'MD/9,221'TVD, a single lateral Bakken Formation horizontal well. **Water Quality** (possible concerns) Salt/oil based mud: Yes intermediate string casing hole will be drilled with oil based invert drilling fluids. Oil based invert drilling fluids for horizontal leg. Surface casing hole will be drilled with freshwater and freshwater mud. High water table: No high water table expected. Surface drainage leads to live water: Yes, closest drainage is an unnamed ephemeral tributary drainage to East Redwater Creek, about 1/16 of a mile to the south from this location. East Redwater Creek is about 5/8 of a mile to the northeast from this location. Water well contamination: No, closest nearby wells are 1 mile and further from this location. Surface hole will be drilled with freshwater and surface casing will be cemented to surface from 1550'. Porous/permeable soils: No, silty sand clay soils. Class I stream drainage: No, Class I stream drainages. Mitigation: X Lined reserve pit X Adequate surface casing Berms/dykes, re-routed drainage X Closed mud system \_\_ Off-site disposal of solids/liquids (in approved facility) Other: Comments: 1550' surface casing to be set to protect freshwater zones and to cover the Fox Hills aquifer. Adequate surface casing and BOP equipment to prevent problems in and around freshwater slough. Soils/Vegetation/Land Use (possible concerns)

Steam crossings: None anticipated.
High erosion potential: Yes, location will require moderate cut, up to 16.3' and small fill, up to 9.0',
required.
Loss of soil productivity: _None, location to be restored after drilling well, if nonproductive. If productive
unused portion of drillsite will be reclaimed.
Unusually large wellsite: No, very large well site 450'X400'
Damage to improvements: Slight, surface use is grazing land.
Conflict with existing land use/values: <u>Slight</u>
Mitigation
Avoid improvements (topographic tolerance)
Exception location requested
X Stockpile topsoil
Stream Crossing Permit (other agency review)
$\underline{X}$ Reclaim unused part of wellsite if productive
Special construction methods to enhance reclamation
Other
Comments: Access will be over existing county road, #313 and existing two track trail. An access road
will be built into location off the existing two track trail, about 390' new road will be built into this
ocation. Closed Loop Mud System will be used. Cuttings will be held in an above ground lined and
bermed area. Cuttings will be flyashed and buried with a minimum of 4' of cover. Oil based invert
drilling fluids will be recycled. Completion fluids will be hauled to a Class II disposal. Pit will be allowed
o dry before being backfilled. No concerns.
Health Hazards/Noise
(nessible concerns)
(possible concerns)
Proximity to public facilities/residences: <u>Closest residence is 1 mile and further in any direction from this ocation.</u>
Possibility of H2S: Slight chance H2S.
Size of rig/length of drilling time <u>Triple drilling rig 25 to 35 days drilling time.</u>
Mitigation:
_X Proper BOP equipment
Topographic sound barriers
H2S contingency and/or evacuation plan
Special equipment/procedures requirements
Other: Comments: Adequate surface casing cemented to surface with working BOP stack should
mitigate any problems.
intigate any problems.
Wildlife/recreation
(possible concerns)
Proximity to sensitive wildlife areas (DFWP identified): None identified.
Proximity to recreation sites: None identified.
Creation of new access to wildlife habitat: No
Conflict with game range/refuge management: No
Threatened or endangered Species Threatened or endangered species listed in Richland county by USFW
service are Pallid Sturgeon, Piping Plover, Interior Lease Tern and Whooping Crane. Candidate species
are the Greater Sage Grouse and the Sprague's Pipit. NH tracker website lists the following as "Species of
Concern": None listed.
Mitigation:
Avoidance (topographic tolerance/exception)
Other agency review (DFWP, federal agencies, DSL)
Screening/fencing of pits, drillsite

Comments: Private grazing surface lands. There maybe species of concern that maybe impacted by this wellsite. We ask the operator to consult with the surface owner as to what he would like done, if a species of concern are discovered at this location. The Board of Oil & Gas has no jurisdiction over private surface lands. Historical/Cultural/Paleontological (possible concerns) Proximity to known sites None identified. Mitigation \_\_ avoidance (topographic tolerance, location exception) <u>X</u> other agency review (SHPO, DSL, federal agencies) Comments: Private grazing surface lands. There maybe possible historical/cultural/paleontological sites that maybe impacted by this wellsite. We ask the operator to consult with the surface owner as to his desires to preserve these sites or not, if they are found during construction of the wellsite. The Board of Oil & Gas has no jurisdiction over private surface lands. Social/Economic (possible concerns) \_\_ Substantial effect on tax base \_\_ Create demand for new governmental services \_\_ Population increase or relocation Comments: No concerns. Remarks or Special Concerns for this site A single lateral Bakken horizontal well, 13,093'MD/9,221'TVD. **Summary: Evaluation of Impacts and Cumulative effects** No long term impacts expected. Some short term impacts will occur. I conclude that the approval of the subject Notice of Intent to Drill (does/does not) constitute a major action of state government significantly affecting the quality of the human environment, and (does/does **not**) require the preparation of an environmental impact statement. Prepared by (BOGC): /s/Steven Sasaki\_ (title:) Chief Field Inspector Date: October 22, 2011 Other Persons Contacted: (Name and Agency) Montana Bureau of Mines and Geology, Groundwater Information Center
